## Altec's 879A Santana 2-way Speaker System

The uniquely styled cabinet is of contemporary oiled walnut with a composition slate top and is hand finished on all four sides so it can be placed anywhere in the room. The high efficiency design provides full clean sound with the smallest of amplifiers and exceptional performance at the lowest volume levels. An unusual blend of furniture utilization and sonic performance.

This all-new, two-way speaker system features Altec's patented 15-inch Biflex Speaker with a 10½ pound magnet structure together with a high frequency tweeter. The system is highly efficient, has a wide dynamic range and excellent transient response. At comfortable listening levels, the 879A will reproduce an extremely clean, undistorted response when used with amplifiers rated as low as 5 watts per channel. High listening levels and greater dynamics can be achieved by using larger amplifiers, that might even exceed the power rating. Reserve power delivers accurate reproduction of transients. The power capacity of the 879A is such that volume levels generated by the system will be louder, in most cases, than you care to listen to before excessive power will damage the system.

### Specifications

|                     |   |                  |                             |
|---------------------|---|------------------|-----------------------------|
| Frequency Response: | 35 to 18,000 Hz                           | Dimensions:      | 24¾" H x 20" W x 17" D      |
| Power Rating:       | 45 watts*                                 |                  | 611mm-H x 508mm-W x 431mm-D |
| Impedance:          | 8 ohms                                    | Shipping Weight: | 52 pounds                   |
| Speaker Components: | 420A Biflex, and Direct Radiating Tweeter |                  | 114 Kg                      |

\*May be used in home entertainment use with amplifiers having up to equal continuous power ratings.

### A New Idea in Speaker Cabinets

For the first time, you can set a speaker system anywhere in your listening room and have beautifully hand-finished furniture in view. This is what the cabinet designers at Altec set out to achieve when they started designing the all-new Santana Speaker System. The basic design includes all-mitered corners, both sides and the back finished in elegant oiled walnut, a full-length-snap-on front grille, and a contemporary inset black composition slate top. The speaker connections are carefully tucked out of sight under the lip formed by the slightly recessed pedestal type base.

With the speaker back completely finished, the Santana handsomely fits into the basic design of your room no matter where or how you place it; as an area divider away from the wall... part of a free standing sound system complex... or alongside your favorite chair.

The perfect blend of quality sound and beautiful furniture will make the new Santana the most functional and enjoyable speaker system on the market.
