**the finest
woods and
finishes . . .**

Cabinet's FINE WOOD finishes are applied to only the most select hardwood veneers. Close quality control combined with Cabinet's complex multi-step finishing operation produces mahogany, walnut, blond mahogany (korina) and ebony finishes, which are superior to the accepted standards of wood finishes in the cabinet industry.

2

Why a Corner Horn . . .

AS THE PERFECT HOUSING FOR YOUR SPEAKER

The basic idea of a corner horn speaker stems from the fact that the multiple reflections of sound waves from three mutually perpendicular walls and floor or ceiling in any room corner increase the effective radiating area of a speaker by a factor of 2 cubed . . . or 8 times!

Therefore, the corner horn is the only means by which the longer wave lengths of the sound spectrum such as the 16 foot organ pipe tones can be radiated by a structure of a size usable in the average living or recreation room. More often than not, the speaker enclosure is the weak link in an acoustic system or chain.

Rebel Corner Horn design improves bass efficiency without introducing distortion. This creates the proper acoustic balance between the normally more efficient high range response and the less efficient bass response. This imbalance between bass and high range response is inherent in loudspeakers. *Only* Klipsch Corner Horn design corrects the imbalance with no introduction of distortion or sacrifice of transient response.

***TRADEMARK**

the

Rebel
series

DESIGNED BY PAUL KLIPSCH

... The country's foremost speaker designer

The FIRST corner horn of practical form and conservative size was patented by Paul Klipsch.

The idea of a corner horn in which a cone type speaker is used as a direct radiator with the back radiated waves utilized by means of a corner is believed to have been first described in Paul Klipsch's patent issued back in 1943.

Speaker systems in the past were known to be deficient in the bass range or else delivered a rumbling distorted bass which lacked clarity or transient response. The corner horn was conceived after years of research in response to a growing public demand on the part of discriminating people for realistic percussion . . . as Mr. Klipsch himself once said, "Let's hear a drum that sounds like a drum."

... AND BUILT BY CABINART

Cabinart, pioneer and leader in the field of high fidelity cabinetry and speaker enclosures, is the exclusive, licensed manufacturer of Klipsch-designed Rebel horns and Rebel/Ortho speaker systems. The REBEL series is available assembled and factory finished and in two exciting kit forms . . . PRE-FINISHED and UNFINISHED.

THE Rebel -3

... Available finished, or **PRE-FINISHED** and unfinished in kit form, (see page 31), or as part of a complete three speaker system.

Largest of the Rebel series, the KR-3 extends bass response down to nearly 30 cycles.

AVAILABLE FINISHES:

- Mahogany
- Walnut
- Korina (Bl. Mah.)
- Black Lacquer

*TRADEMARK

the pioneers in radio furniture

The installation of a high fidelity music reproducing system is more important than its selection. Cabinart, as the industry's largest furniture manufacturer, designs and builds solely for the hi-fi field. Each design is an engineer's answer to an individual hi-fi equipment storage problem. Each cabinet, properly used, is a designer's expression of the elements of good furniture design.

CABINART is a division of
G & H Wood Products Co., Inc.
99 North 11th Street, Brooklyn, N. Y.
