The BX-200 is top-performing hi-fi speaker system developed by Coral Audio Corporation. The world-renowned audio know-how and all the experiences of the Coral are reflected in this speaker system. It is no wonder, therefore, that this product has been widely acclaimed in audio circles all over the world.

Try TA-7700 for use of BX-200 System.

BX-200

Large Input Woofer

The 16 cm (6 1/2") woofer of the famous "L" series is designed for very large input power of 15 watts (instantaneously 30 watts). The high-compliance free edge, the long-travel voice coil and the tough diaphragm do not yield non-linear distortion for large input power. Almost no distortion is yielded even for large amplitude in low-frequency range by the excellent cone which sensitively and exactly reacts to input power variation, and the stressing bass and the clear alto can beautifully be reproduced.

Horn Tweeter for Ultra High Frequency Reproduction

The vibration system using the diaphragm made of special synthetic resin and elaborately designed, in combination with the solid die-cast horn, can easily reproduce sound up to ultra high frequency of 20,000 Hz which exceeds audible limit.

High-Toned Design

The arabesque design variegating the cabinet front is manually finished one by one and is a masterpiece made of bronze. The tastefulness of the bronze in good harmony with the saran net makes the atmosphere of your room more dignified.

Cabinet Constructed with Plywood for Audio Components

The high-grade specially made plywood is used as the basic material of the cabinet, which is accordingly free from the harmful resonance. Furthermore, the complete sound absorption is attained by the glass fiber stuffing which prevents the generation of echo and standing wave inside the cabinet.

Unrestricted Installation

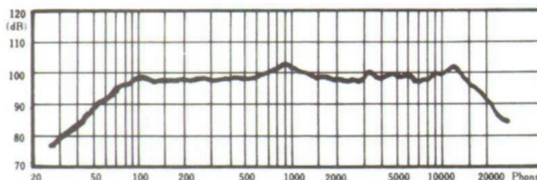

Because of the bookshelf type, the speaker system can freely be put lengthwise or breadthwise, or on a bookshelf, a desk or on a wall. Please enjoy your room arrangement with many varieties.
