

Dokorder®

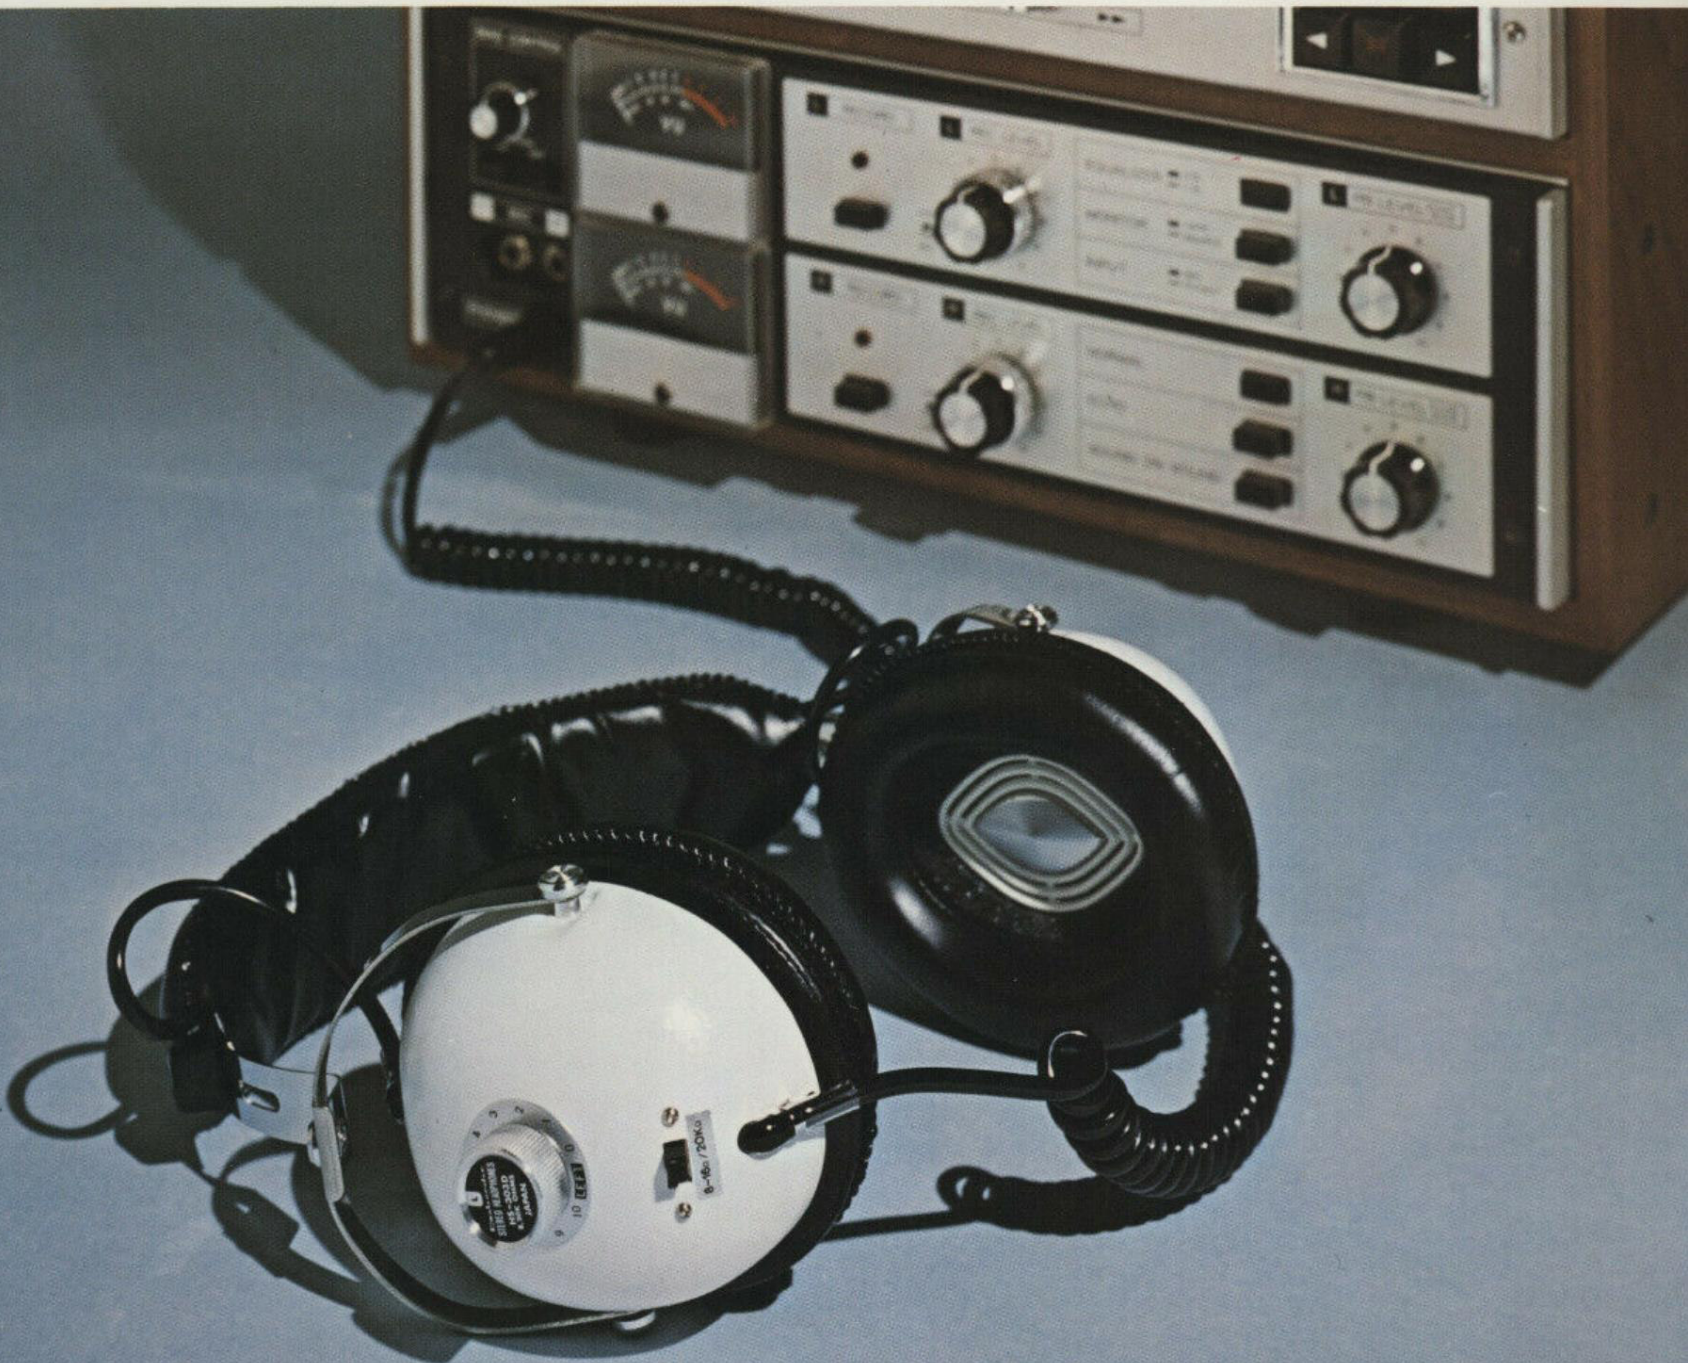

HS-303D

The new, very personal world of Dokorder professional stereo

The new Dokorder HS-303D is a professionally designed and built stereo headphone set that brings a whole new world of stereo purity to you and you alone. It does this by incorporating one of the most advanced full range units ever developed, a mechanical two-way system that utilizes double cones in each channel for sound realism throughout a 15 to 23,000Hz frequency response range. It does this with its high sensitivity (115 dB at 1,000Hz, 1mW) and low distortion figures. It does this with independent volume controls on the outside of each phone. And it does this with some of the finest in human engineering

techniques as well—the HS-303D's adjustable headband and soft vinyl ear-pads are designed for hours of comfortable stereo enjoyment.

Don the HS-303D and you're ready for monitoring or listening to full-fidelity stereo without disturbing others. Since right and left channel sounds never have a chance to interfere with each other in the air, the HS-303D brings you optimum stereo effect regardless of noises or room acoustics. And its unique curl cord stretches and retracts automatically, giving you complete freedom of movement without getting in your way. It is recommended for use with all Dokorder products designed for stereo headphone listening.
