

The Epicure Model 201

The Model 201 from Epicure: a unique and completely functional free-standing cabinet design that allows flexible room placement with superlative linear tonal response.

The Model 201 is aptly named. It features two pairs of Epicure's famous high performance tweeter woofer modules. This offers you a new dual-direction concept. Sound spreads evenly throughout your listening area. Both modules emit smooth, transparent sound; one indirectly from on top the walnut cabinet, the other from the front-surface position.

The merging of two such modules eliminates most room placement acoustical problems (especially in relation to sound-absorbing rugs and furniture). This results in a full clear sound throughout your room.

SPECIFICATIONS:

Size: 11 x 8 x 28 inches

Weight: 40 lbs.

Frequency

Response: 30 to 19 kHz \pm 3 dB

Recommended

RMS Power

Range: 20 to 100 Watts

Dispersion: Bi-directional; nearly hemispherical radiation from each radiating plane

Crossover

Frequency: 1800 Hz; each set of transducers are custom matched within 1 dB of efficiency, thus eliminating all electronic crossover devices present in most other types of loudspeakers

Drivers:

2 - 1" Air spring transducers
2 - 8" Low frequency transducers

Impedance:

4 or 16 Ohms

Tweeter

Level Control:

Rheostat

Inputs:

Convenient pushbutton terminals

EPICURE

The Epicure Model 201

Epicure's goal is to provide state-of-the-art reproduction of sound. Our ability to manufacture the Tower, the ultimate among all loudspeakers, demonstrates our advanced technology. Based on this vast experience, Epicure offers the Model 201, our ultimate dual module loudspeaker.

The unique contemporary cabinet of the Model 201 permits four Epicure drivers to work within one enclosure. Each system contains two air spring tweeters and two low mass transducers matched within one decibel. Such precision matching eliminates all need for crossover devices. Only Epicure offers such advanced technology. All other loudspeakers use crossovers that hold back full range musical transients. The Quartet's air springs instantly reproduce all high frequency detail. A matched pair of low mass long throw bass drivers permit deep and accurate reproduction of the lowest organ pedal.

The Model 201's cabinet design is especially important to how the speaker sounds in your home. Many other loudspeakers sound good in the store, but their in home performance may be disappointing. The Model 201 spreads smooth transparent sounds throughout any home. Because one module radiates sound high over your furniture while the other operates as a normal front loaded speaker. Linear sound spreads to all your listeners, wherever they sit. The 201's appearance also enhances your decor. Epicure uses only the finest hand-rubbed hardwood veneers. The grill fabric is easy to change to fit your home. After all, the 201 was designed for your home, from Epicure with love.
