

NEW PRODUCTS

• **E-V 4-Way Speaker System.** Handsome cabinetry is combined with advanced engineering design in the Georgian, a new

Electro-Voice multispeaker reproducer which utilizes a Klipsch "K" horn with special 15-in. driver for exceptional bass response. An electrical crossover feeds frequencies above 300 cps to a compression-type horn-loaded mid-low frequency driver with 58-in. path length. An acoustic crossover confines frequencies from 1000 to 3500 cps to a special diffraction horn. Above 3500 cps, an E-V Super Somax very-high-frequency driver takes over to extend response beyond the upper limit of audibility. The unit is equipped with two controls, one to govern "presence", the other to control brilliance. Dimensions are 52" h x 34" w x 26" d. For complete description and technical specifications write to Electro-Voice, Inc., Buchanan, Mich.
