

model **ML-70P****Very Professional and Dependable Belt-Drive Turntable.**

Model ML-70P appeals at once to the ear and the eye of the music lover.

The extra frills, such as a complete automatic system, have been left out so that this model is more dependable and at the same time can be offered at a reasonable price.

However, in every respect only the best components have been used and they have been assembled with painstaking precision.

The result is an outstanding turntable which will bring hours of listening pleasure to its proud owner.

The 4-pole synchronous motor that moves the belt-drive turntable platter assures that the speed of the record does not vary.

In order to insure perfect contact between the stylus and groove this model incorporates a lateral-balancer and anti-skating system and a static balanced pipe arm.

It also has a semi-automatic system equipped with an automatic lifter to guard your records from accidental damage.

The professional performance that comes from these components is matched by the distinctive styling of the walnut colored cabinet.

Engineering features Moving Magnetic Cartridge

The moving magnetic cartridge is combined with an S shaped static balanced pipe arm and diamond stylus in order to obtain a wide frequency response and clear and sharp music notes. The pressure on the diamond stylus is adjustable from 0~4 grams with direct reading for this purpose on the pipe arm. This model also features an exchangeable system for the Head-Shell.

Semi-Automatic System

Model ML-70P has by-passed the costly automatic system in order to avoid the possibility of mechanical trouble. Instead it uses a semi-automatic system which has an automatic lifter to insure perfect contact between stylus and groove. It protects your records and also gives you more control of any part of the

record you want to play.

4-Pole Synchronous Motor

The 4-pole synchronous motor in model ML-70P is one big reason for its outstanding performance. It is connected to the 30cm die-cast aluminum platter by a belt and keeps this platter revolving at exactly 33-1/3 or 45 r.p.m. It is a trouble-free design that virtually eliminates wow and flutter.

Lateral-Balance, Anti-Skating System

This system is incorporated in model ML-70P to guarantee perfect tracking at all times. Whether you are just beginning to listen to a record or are at the very end the diamond stylus will stay in the correct groove and in the center of that groove for perfect reproduction of whatever is on the record.
